

Summary

- 6.9 years of experience in web development.
- Open source contributor (rails, go lang and aws gem).
- Object Oriented Programmer. TDD development.
- Coding experience in Ruby on Rails, Golang, Java.
- Basic Selenium Java automation.

1) Software Developer

Reflektive

Dec 2017 - Till present

Reflektive is a Employee Performance Management platform that works to empower you to take ownership of your own success at work.

HRIS Automation:

- This feature involved automating the import process of employees from the respective integration, Company is using (CSV, Bamboo HR, Workday, ADP, Dropbox, Greenhouse).
- Responsible for scaling the cron job by executing import process runs in parallel.

Selenium Java automation:

- Automation of HRIS flow to help speed up testing.

2) Software Developer

Crowdfire

July 2016 - Dec 2017

The best social media tool for online marketing and growth.

Properties:

- This Go microservice is used for storing properties (posts/blogs/videos) for a user of given networks via which they have signed up on Crowdfire.
- Worked on storing properties data in elasticsearch and created API which sends generic response for networks user has added.
- Worked on storing user profile and properties metrics to calculate user growth on audience networks.

Property networks:

- This project involved multiple services where we worked on adding networks like youtube, wordpress, tumblr, medium.
- Worked on integrating wordpress and youtube accounts and making sure real time new property was available to user by on app to share it.
- Worked on syncing past properties of user and showing these properties as prescriptions for sharing across multiple audience networks.

3) Senior Software Developer

TinyOwl

Feb 2015 - July 2016

TinyOwl is an food ordering app. Making it easy for customers to order food online.

Payments:

- Handled payments. Solely responsible for working and integration of new payment wallets.
- Worked in storing payment gateway logs, their requests and responses. Identifying and reducing payment and automated refund failures.

Location Service:

- Started with the project of refactoring the localities mapping. Removed redundant tables and handled the migrations and corresponding code changes.
- This was moved into Micro Service. Was the creator and owner of this service. Solely responsible for its development and testing.

4) Senior Software Developer

Fab.com

June 2012 - Dec 2014

Fab is one of the fastest growing E-commerce marketplace of everyday design products.

Front End Returns:

- A pair programming project in which customer can return products from his/her past orders. Users previously had to call customer care for initiating return.
- Implemented backend logic to calculate refund amount and create RMA for user.
- Handled cases where product was not eligible for return.

Database Migration:

- A team project in which records were migrated from remote database into our production database. This involved migrating existing user and their orders.
- Developed script which connects two remote databases.

Version control system

GIT, SVN

Languages and Technologies

Ruby on Rails, Golang, Java, C

Databases

Mongodb, Mysql, Postgresql, Dynamodb, Elasticsearch

Achievements

- IEEE paper on Version Control in Android selected in PSRTC conference, Pattaya, Thailand.
- Best Student of the year in school.

Academics

- BE, Computer Engineer from Pune Institute of Computer Technology, 2012 with 70%.
- HSC from CBSE board DAV Public School, 2008 with 87%.
- SSC from CBSE board DAV Public School, 2006 with 92%.
